Where can I get popcorn?

The free popcorn at Willard Straight Hall is terrific!

Popcorn’s great. Popcorn lung? Not so much.

A chemical called diacetyl was once used to give foods, like popcorn, a rich, buttery flavor. But diacetyl causes “Popcorn Lung,” a medical condition in which lung tissue and airways are scarred and narrowed, causing difficulty breathing. Know where else you can find diacetyl? In e-cigs. It’s often added to “e-juice” to enhance a vape’s flavor.
